

Abstract

Modern L^AT_EX distributions include a tool called **lualatex** that allows users to dynamically produce content via use of Lua code. Unfortunately, the Lua standard libraries do not have as much functionality as other popular scripting languages, such as Ruby. The goal of this project is to incorporate Ruby into L^AT_EX in a manner similar to **lualatex**, but with the power and simplicity of Ruby over Lua.

Working Examples

How It Works

In order to correctly compile a document using R^BT_EX, one must run the **rblatex** command on a valid L^AT_EX document. The workflow of R^BT_EX looks like
